Workflow of the website b/w different Departments

Ashik - Crucen

1. MSR Department :- If Raises a Requirement

⇒ here the msr department admin will add all the requirements

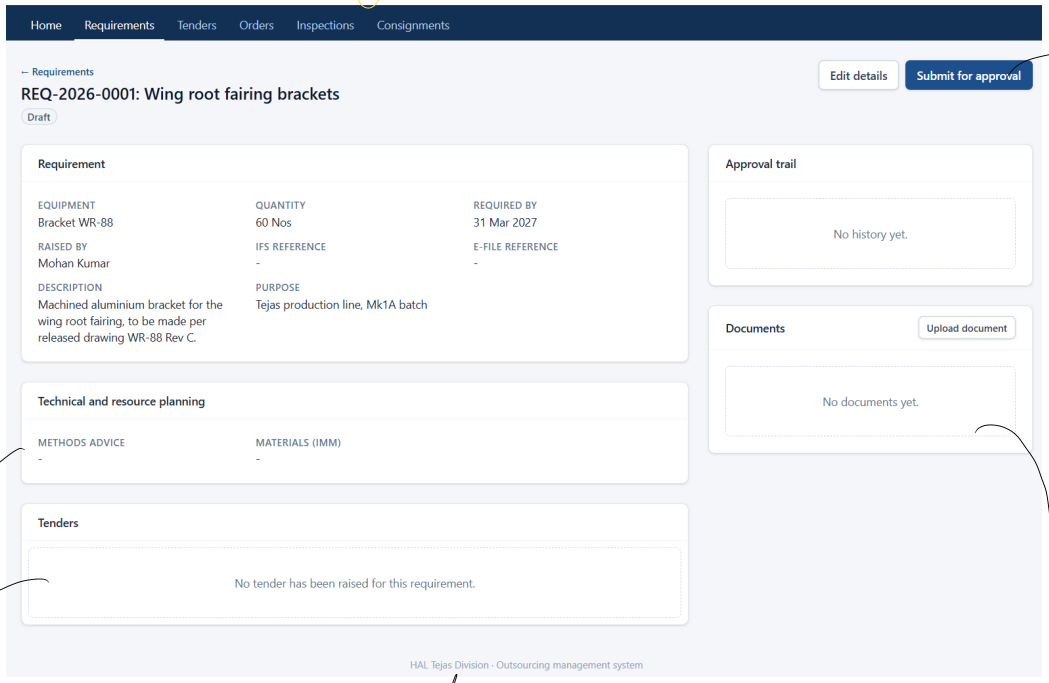

Ashik

⇒ For this page we need all the information the departments have to raise a requirement

⇒ Whether to add any images of the equipments or anything like documents.

⇒ One more thing if you have any documents containing all these information you can directly upload it and then the extraction work and fill all the information

(2) This is the tracking or status page of the that equipments.

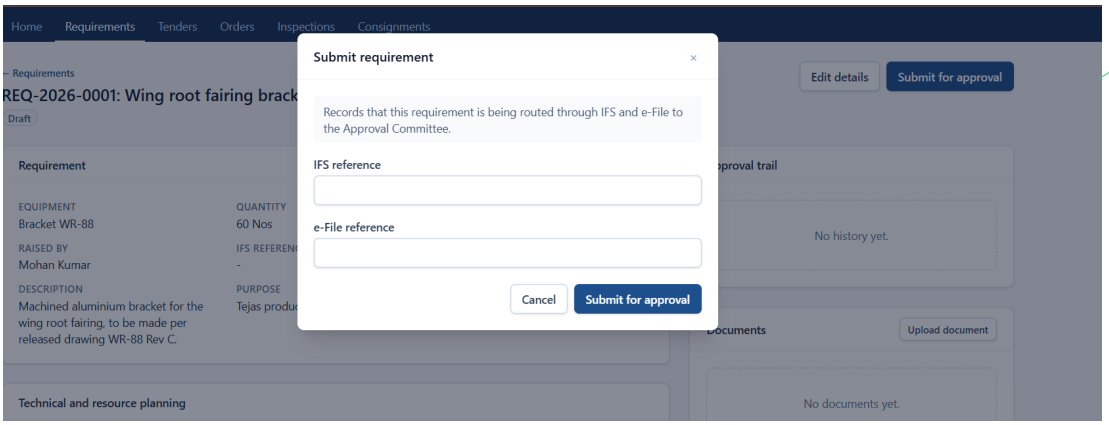

after clicking on this the proposal get submitted to the next committe for approval

this show the status if any tendor get raised

If any documents needed to upload like drawings and et.

- **Requirement:** what you entered (equipment, quantity, required-by date, description, purpose). *Raised by* is filled in from your login, not typed. The **IFS** and **e-File** references show `-` because you haven't submitted yet.
- **Technical and resource planning:** the later departments fill this in. Methods writes the manufacturing advice and IMM writes the materials, so both are empty. Once Scheduling splits the quantity, three boxes appear here: made within HAL, from other divisions, and to vendors.
- **Tenders:** empty until Outsourcing creates a tender for the vendor portion. After that, each tender and each retender round is listed here as a link.

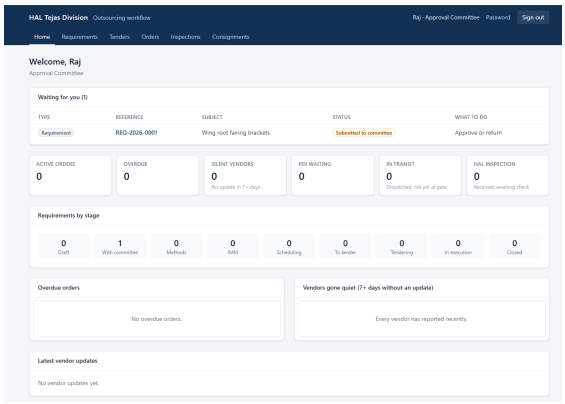

here we are planing to add IFS & e-file reference so, it will get traced

Inside the IFS & e-file

this is optional & also need a comments on these by the HAL team

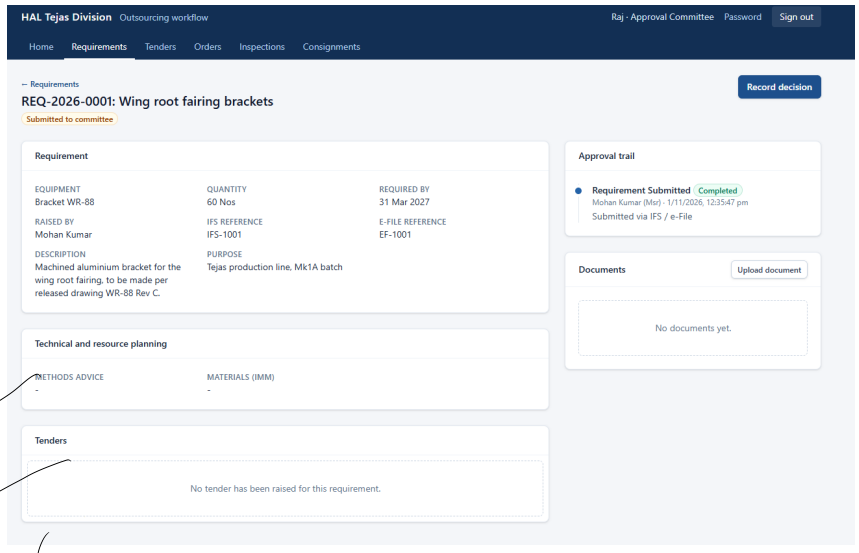

⇒ After click on submit approval let's move to the next department here the mrs department can track about the flow.

2> After this we have to move to the committe Department (admin) (Committee)

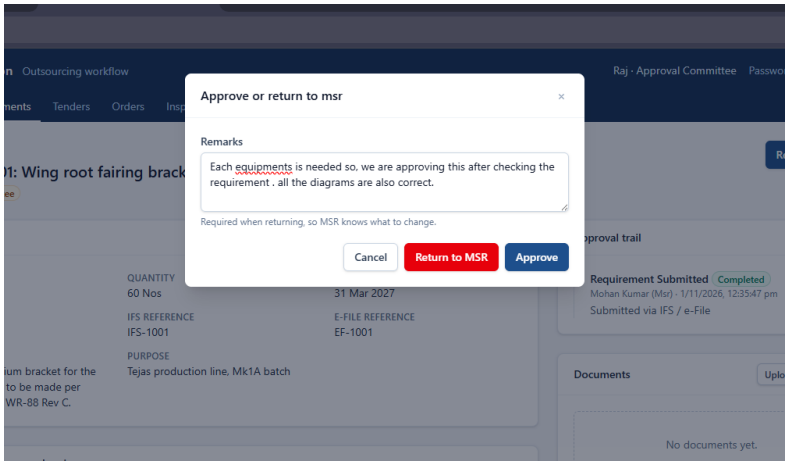

1

2

This two get updated when IMM & Tenders act.

↳ This is what the approval committee see when MSR department submit

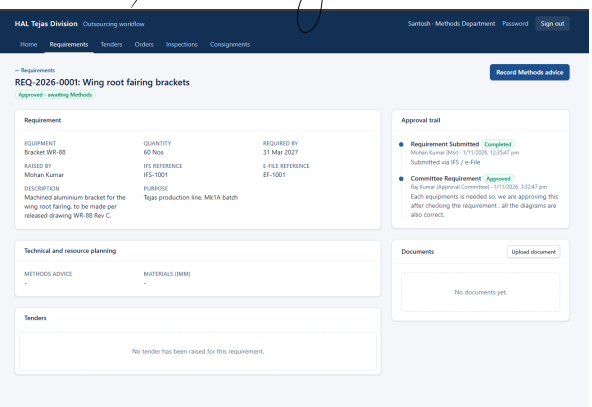

③ Whether to approve or return

④ After approval goes to methods department & admin

3> Methods Department :-

① here this department will decide how will this equipment is going to manufacture

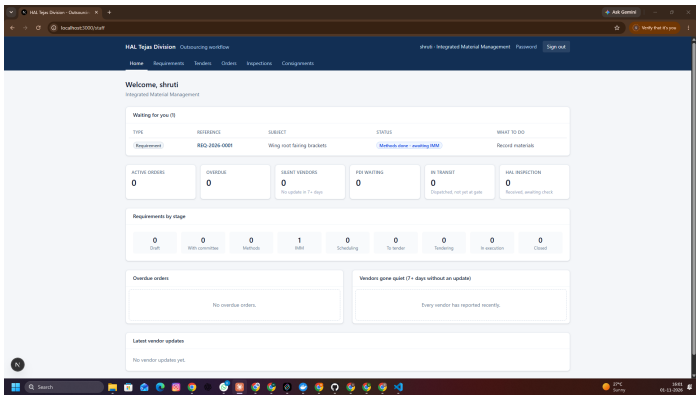

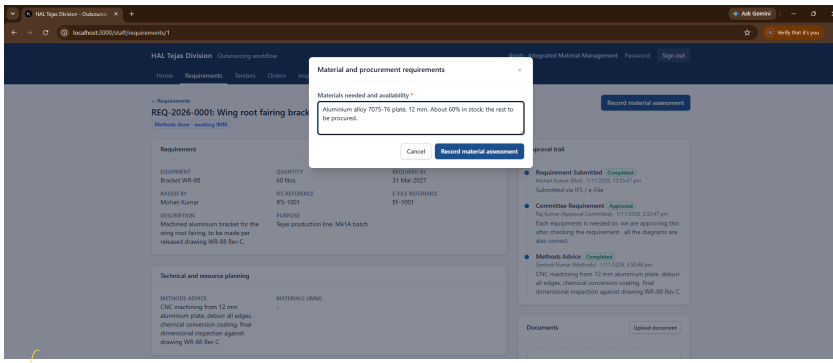

⇒ after clicking on record Method advice the option to give the information then it will be returned to IMM & the super admin.

What it is: the Methods Department decides how the part should be made and which processes it needs. That advice becomes the technical basis for the next steps, so IMM can work out the materials and Scheduling can decide who makes it.

What happens after: the status becomes *Methods done - awaiting IMM*, your advice appears under *Technical and resource planning*, and the requirement moves to `imm_admin`.

4) Now we come on IMM departments (here it tells what materials we have what not & how much).

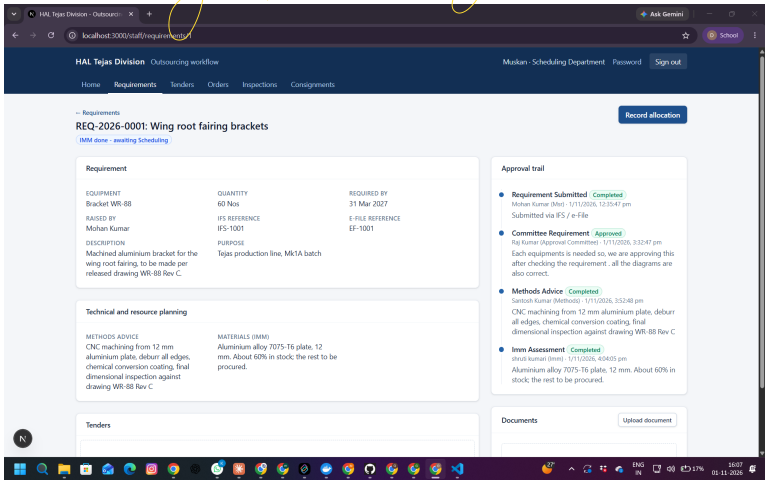

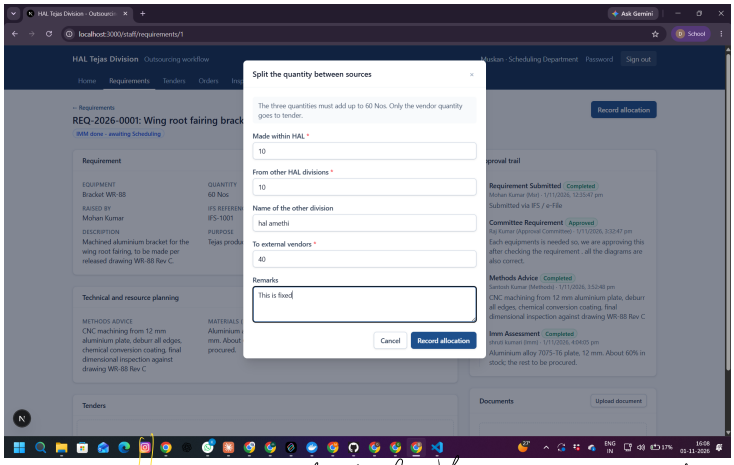

↳ In the box they give information & approve

`imm_admin` (IMM)	**Record material assessment**: which materials are needed and whether they are in stock	*Aluminium alloy 7075-T6 plate, 12 mm. About 60% in stock; the rest to be procured.*

5) Scheduling part :- They decide how many parts will come from where

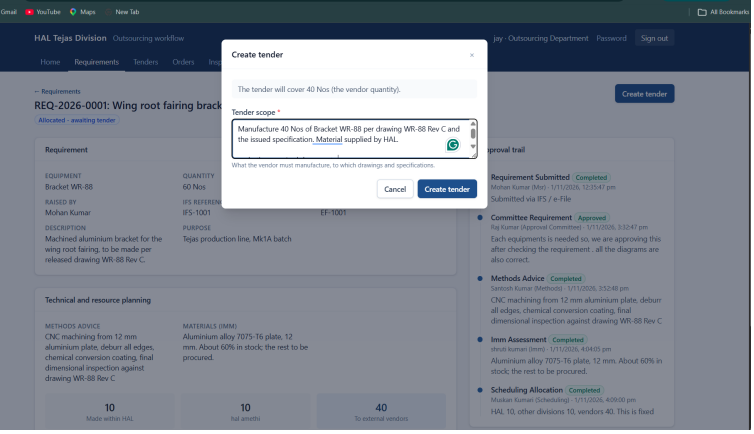

In this they fitted the no. & remarks

`scheduling_admin`	**Record allocation:** splits the 60 items by who makes them	Made within HAL **10**, From other HAL divisions **10** (name the division), To external vendors **40**

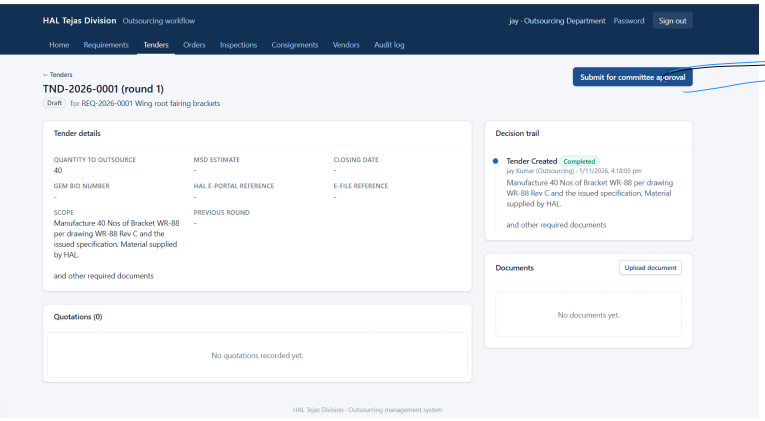

4) Now outsourcing department will create tender & then this tender will go th committee to get approval

Ask how they create tender what information are in the tender - same for other two above departments.

⇒ here at requirement create the tender

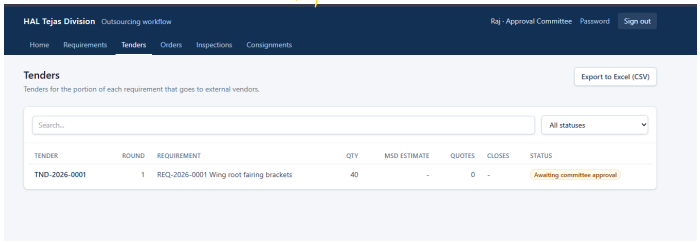

⇒ after creating move to tender

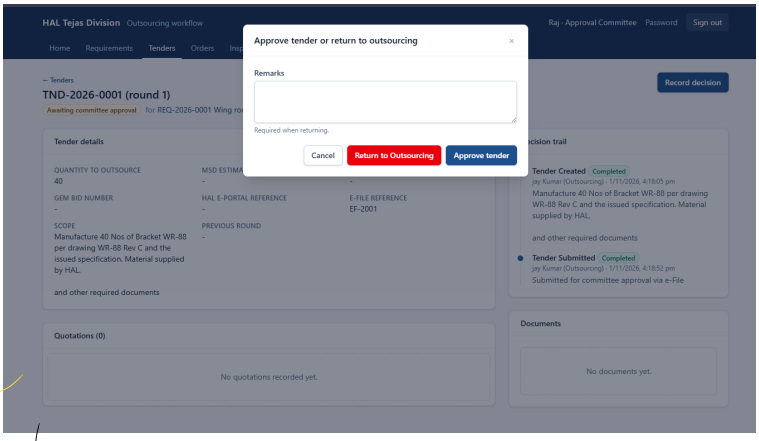

⇒ By clicking on the tender get submitted to committee for approval.

⇒ Now again go to committee page.

⇒ Committe approval

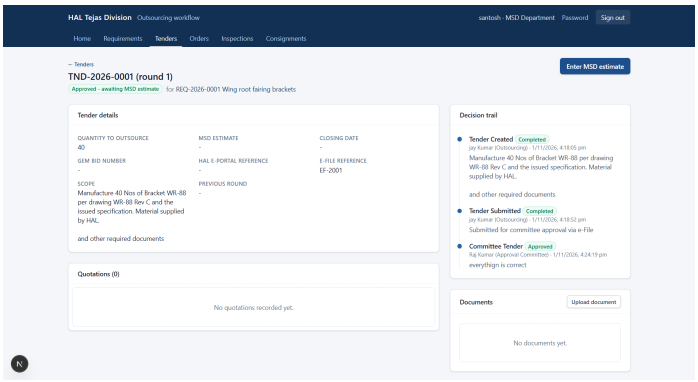

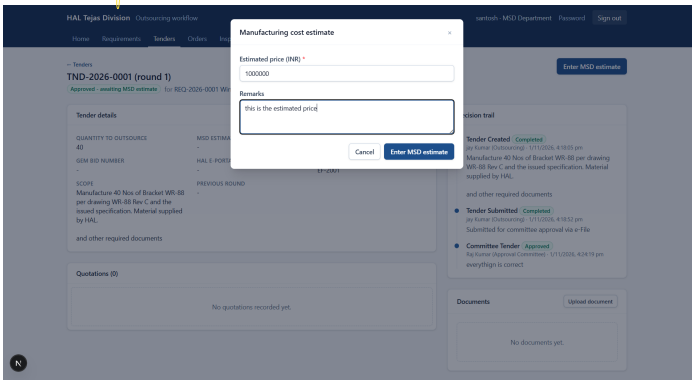

Approved by the committe

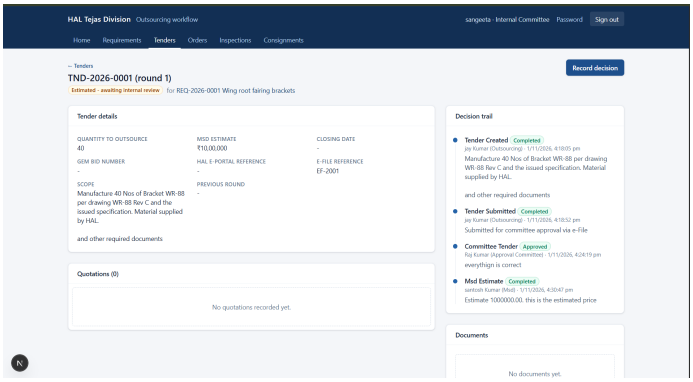

↳ if return then again to the outsourcing

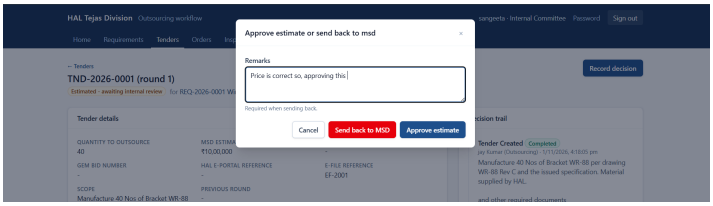

6) Now it move to MSD department for the price estimation

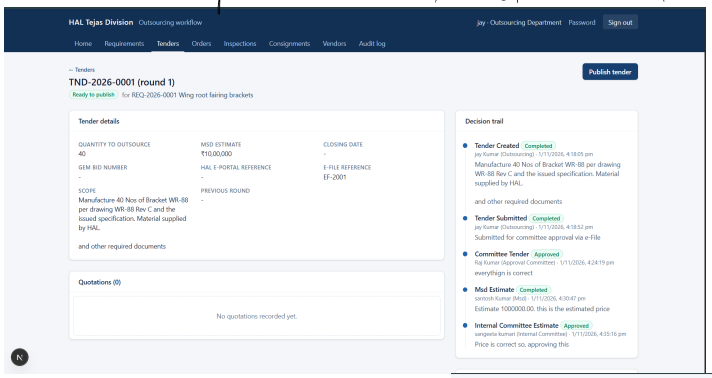

7) Now the Internal committee approve the price

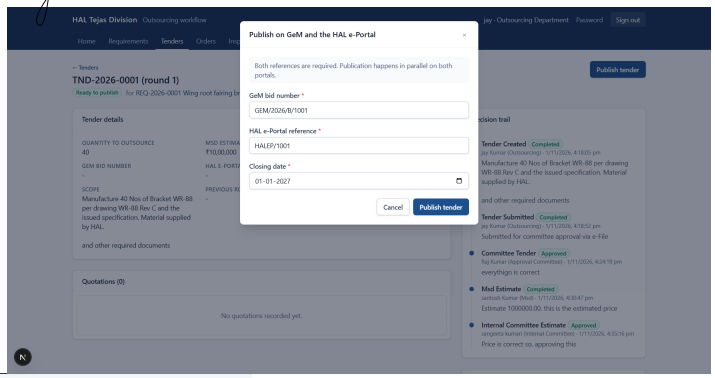

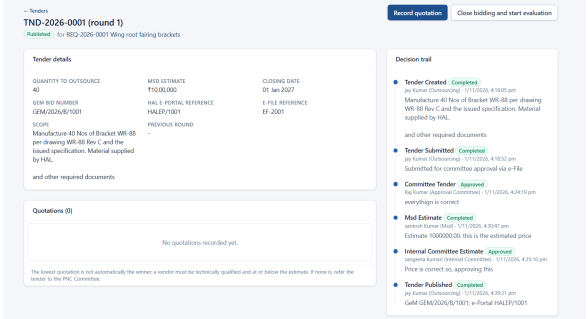

8) Now outsourcing will publish the tender to gem portal & their e-portal

9) Now publish the tender with some information

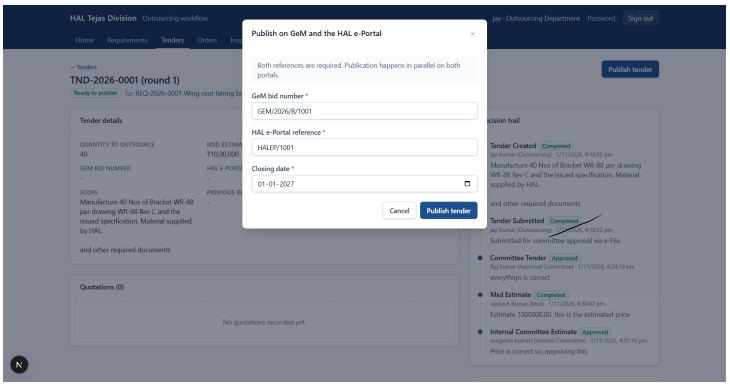

② Record Vendor quotation

(currently we have doubt about this how to implement this like fetching the document from the gem portal and the e-portal and the evalute them on the basis of their eligibility criteria through AI.)

⇒ We will inflem this later.

③ Current Implementation :-

1

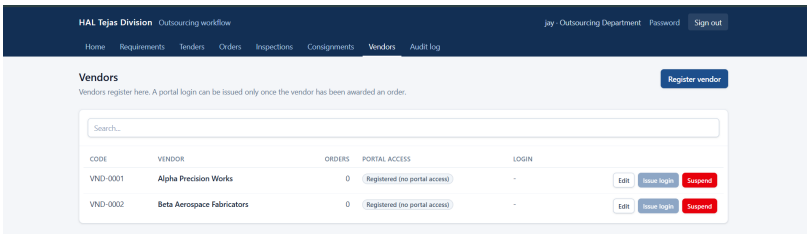

Step 1: Publish (Outsourcing)

Open `TND-2026-0001` and click **Publish tender**. Both references are required:

Field	Example
GeM bid number	`GEM/2026/B/1001`
HAL e-Portal reference	`HALEP/1001`
Closing date	any future date, e.g. 31-12-2026

This records that the tender went out on both official portals. Status becomes *Published*.

2.

(Here we are registering the Vendor)
(Will change later).

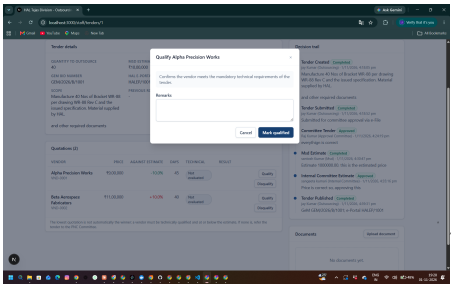

3 Here we add the Quoted price & & delivery date. Then we evalute on the technically & comercially.

Step 2: Record the vendors' quotations

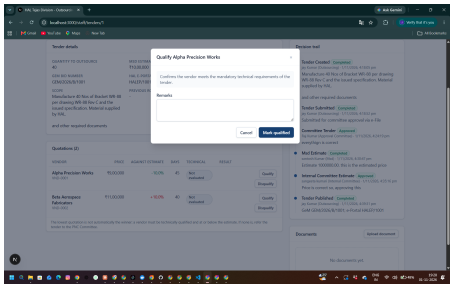

Vendors quote on GeM and the e-Portal as today, so Outsourcing records what came in. Click **Record quotation** once per vendor:

Vendor	Quoted price	Delivery days
Alpha Precision Works	`900000`	45
Beta Aerospace Fabricators	`1100000`	40

Alpha is below the ₹10,00,000 estimate and Beta is above it. That lets you see both outcomes.

Not Qualified

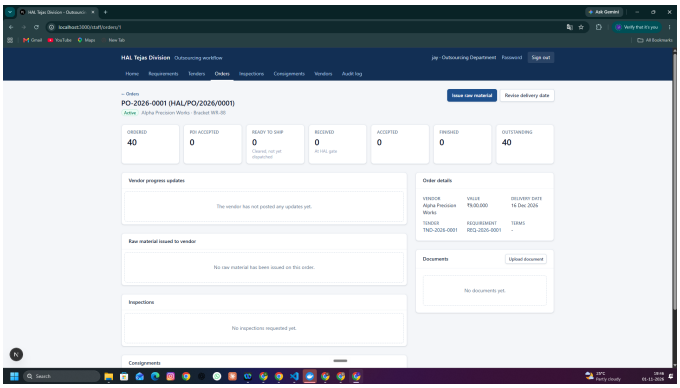

Qualified

Step 3: Evaluate

On each row, click **Qualify**. Remarks are optional for qualifying; **Disqualify** requires a reason. The table then shows:

- **Alpha:** *−10.0%* against the estimate, **Eligible, lowest**, with an **Award** button.
- **Beta:** *+10.0%*, **Above estimate**, with no Award button.

Only a vendor that is technically qualified **and** at or below the estimate can be awarded. The lowest price alone isn't enough.

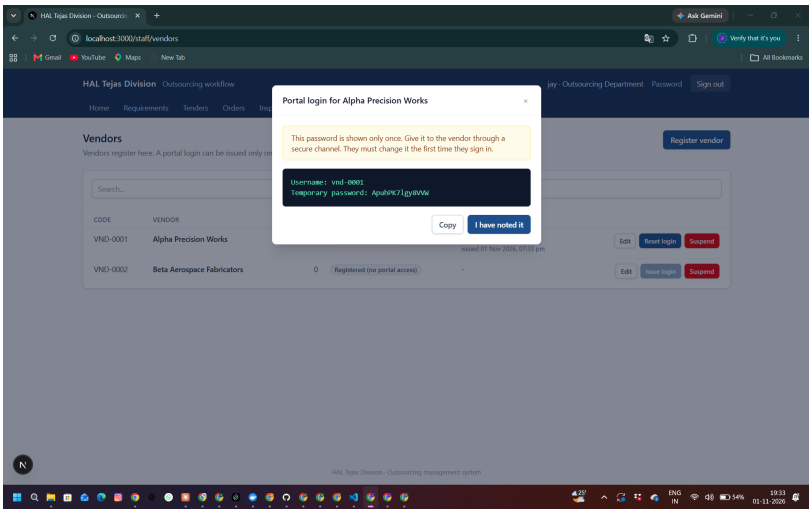

Step 4: Close bidding and award

1. Click **Close bidding and start evaluation.**
2. On Alpha's row click **Award.** Enter *HAL purchase order number* `HAL/PO/2026/0001`. Leave the delivery date empty to use today plus the 45 quoted days.
3. Click **Place purchase order.** You land on the new order page, `PO-2026-0001`.

What this unlocks

After the award, Alpha can be given a portal login: on **Vendors**, **Issue login** is now enabled for Alpha only, and stays greyed out for Beta.

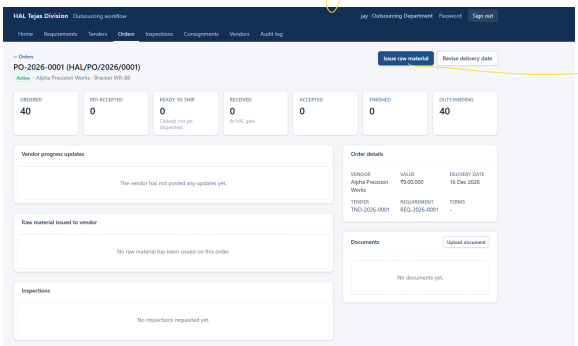

⇒ Here we give the approval to this company to produce the product.

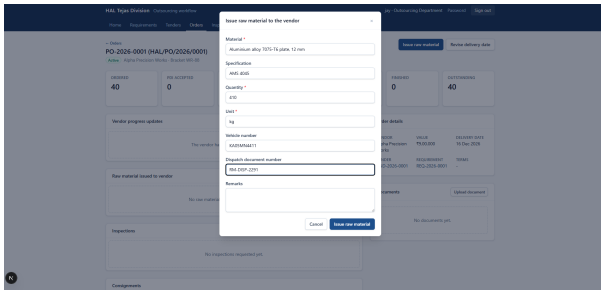

⇒ here outsourcing department provide a username & password to vendors for their updates

⇒ By this vendor give updates

9. Orders page on Outsourcing department

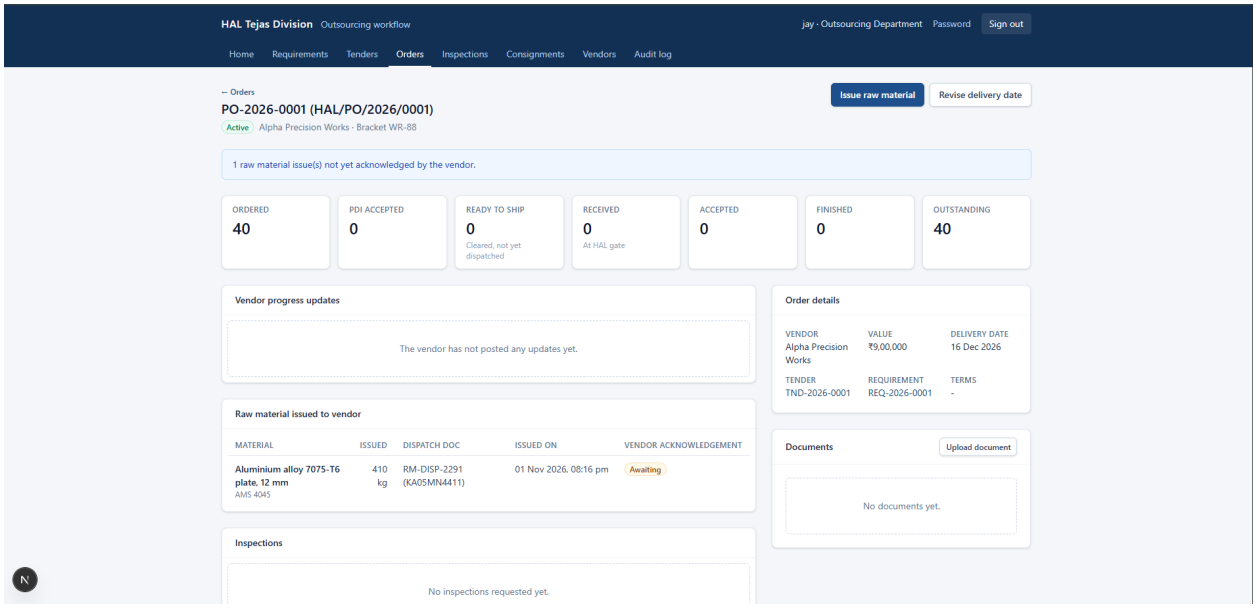

→ click on the Issue raw material to the Vendors.

Ask :- Need this information what they give for the security for checkup.

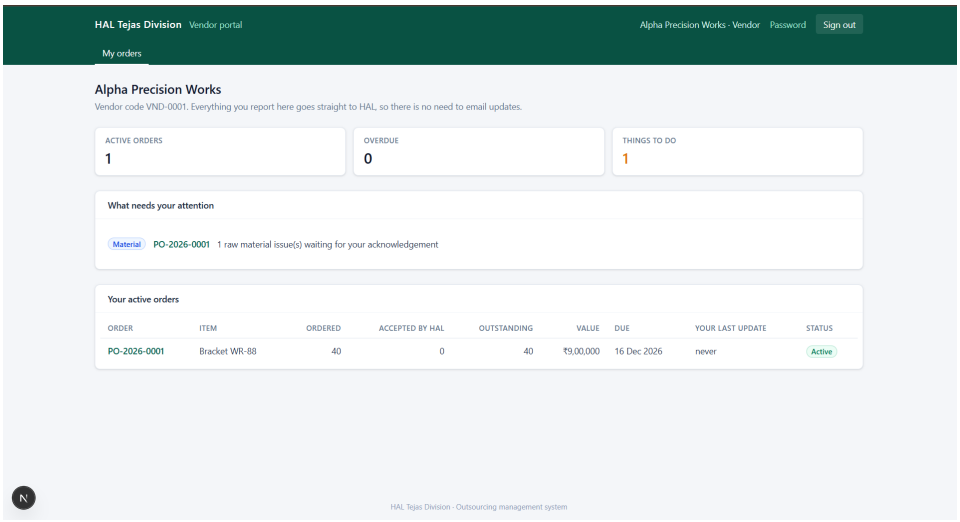

⇒ click on issue raw material

After Issuing the first batch.

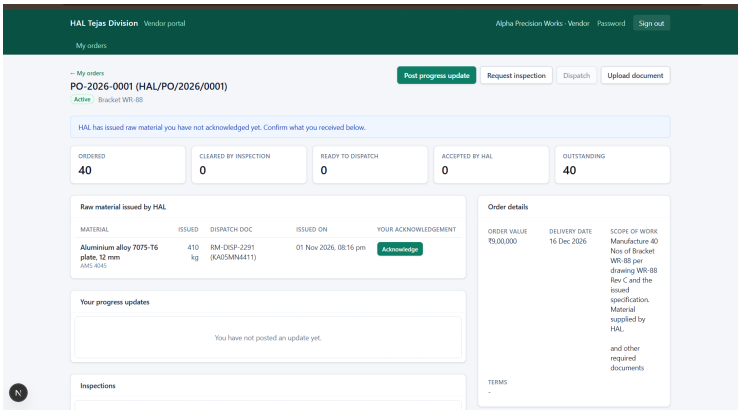

Ask :- Needed More Input here.

9 Now come on Vendor side

⇒ With their username & password (given by the HAL) they will login.

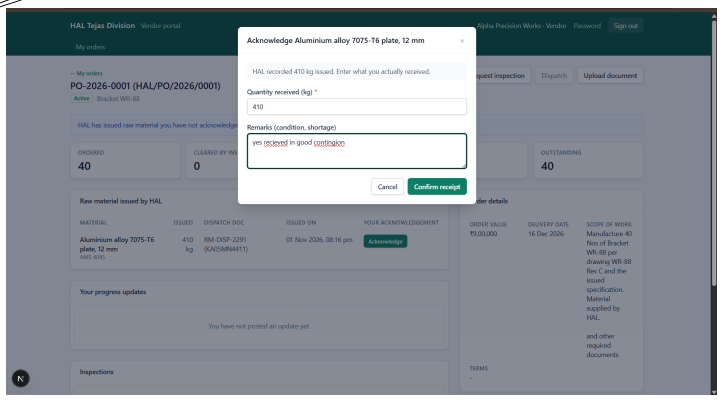

1.

⇒ Their order information

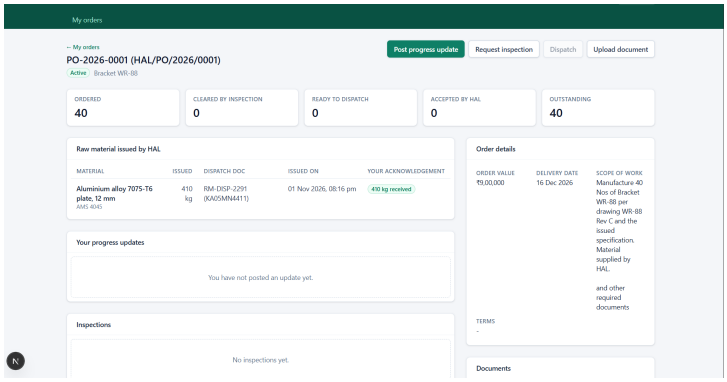

⇒ After clicking on the post progress update (how much work they had done).

2.

⇒ Confirm receipt (that they got the order safely) they have received.

3.

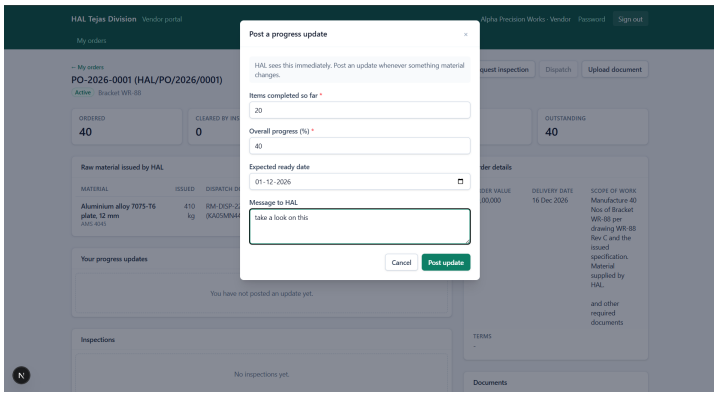

What the page tells the vendor

- **Blue banner:** "HAL has issued raw material you have not acknowledged yet". The system nags until it's confirmed.
- **Raw material issued by HAL:** the 410 kg of aluminium plate with its dispatch document and vehicle number, and a green **Acknowledge** button.
- **Counters:** Ordered 40, Cleared by inspection 0, Ready to dispatch 0, Accepted by HAL 0, Outstanding 40.
- **Order details:** the value, the delivery date (16 Dec 2026) and the scope of work copied from the tender.
- **Four buttons at the top: Post progress update, Request inspection, Upload document,** and **Dispatch**, which is greyed out on purpose. A vendor can only dispatch items an inspector has cleared, and none have been yet.

(4)

What the page tells the vendor

- **Blue banner:** "HAL has issued raw material you have not acknowledged yet". The system nags until it's confirmed.
- **Raw material issued by HAL:** the 410 kg of aluminium plate with its dispatch document and vehicle number, and a green **Acknowledge** button.
- **Counters:** Ordered 40, Cleared by inspection 0, Ready to dispatch 0, Accepted by HAL 0, Outstanding 40.
- **Order details:** the value, the delivery date (16 Dec 2026) and the scope of work copied from the tender.
- **Four buttons at the top: Post progress update, Request inspection, Upload document,** and **Dispatch**, which is greyed out on purpose. A vendor can only dispatch items an inspector has cleared, and none have been yet.

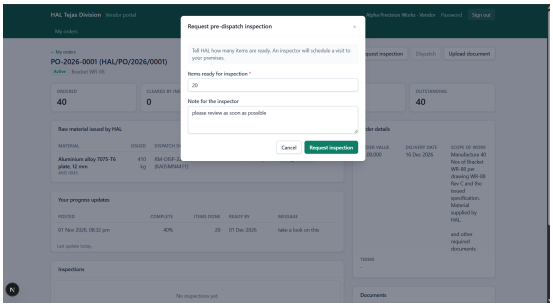

⇒ In this vendor update how much work they have did.

⇒ after clicking on the post update the update goes to the outsourcing admin

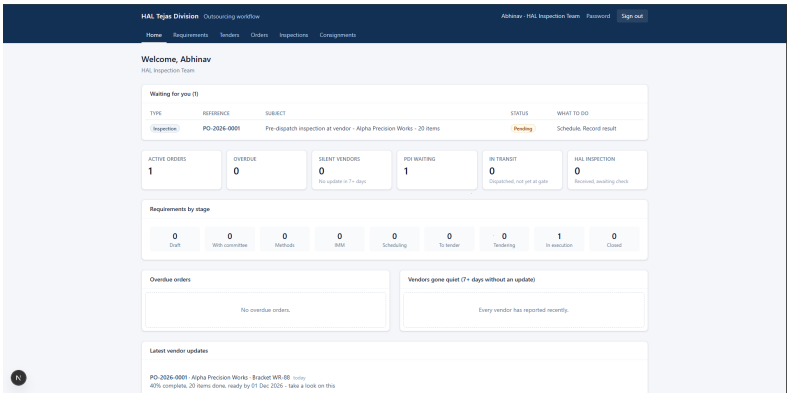

10) Inspection Team :-

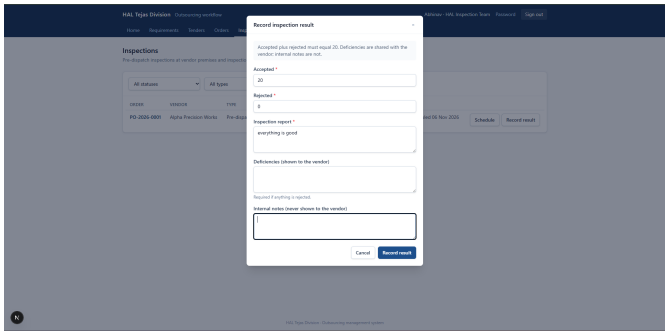

(1) when vendor click on the request inspection the notification delivered to the inspection team.

⇒ here vendor request for inspection.

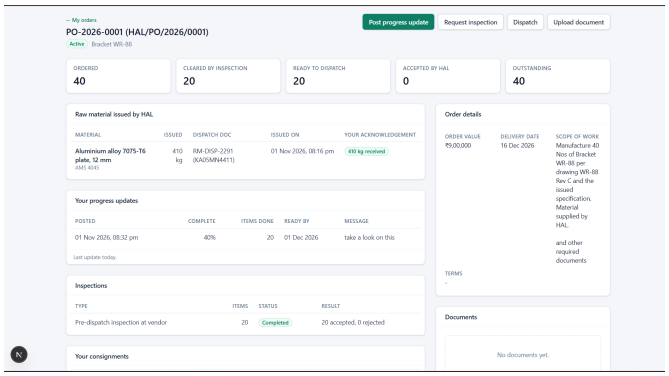

⇒ On the side of Inspection team

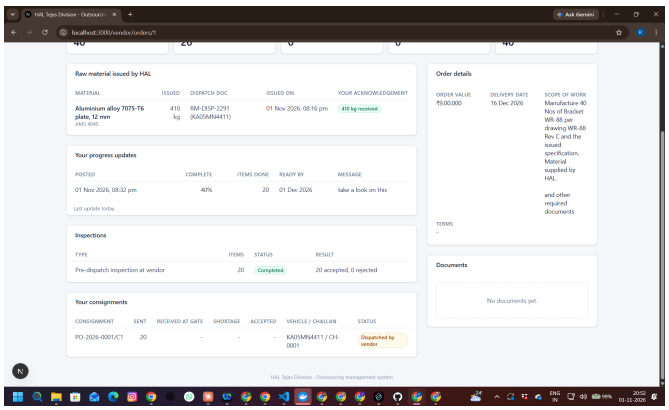

⇒ After inspection the inspector give the result

⇒ then according to that the dispatch option get active on vendor side

⇒ The dispatch option on the vendor side

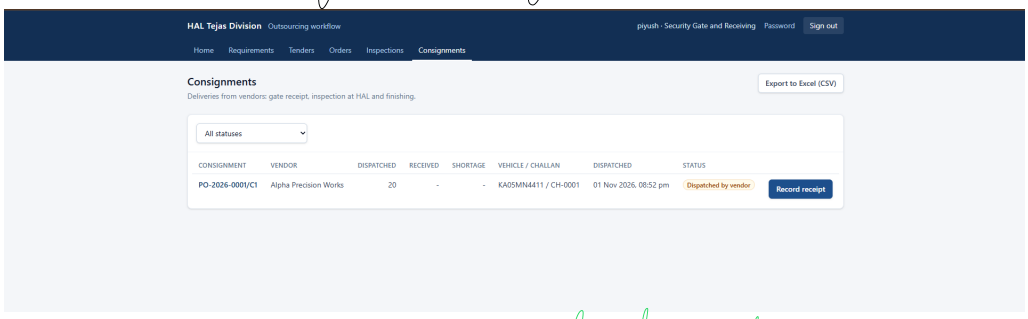

⇒ After dispatch during that we have to fill the value.

1. This window (Vendor, Alpha)

Field	Enter
Items in this consignment	20
Vehicle number	KA05MN4411
Delivery challan number	CH-0001

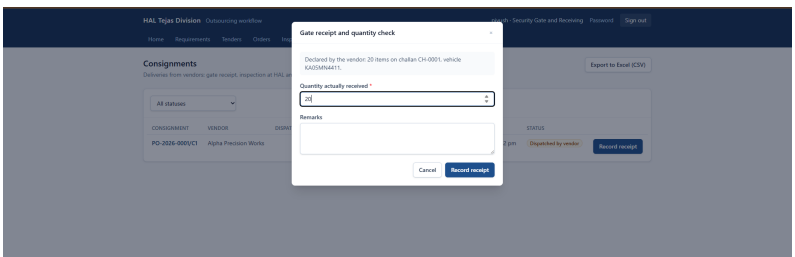

(1) The gate admin :-

At the consignments page :-

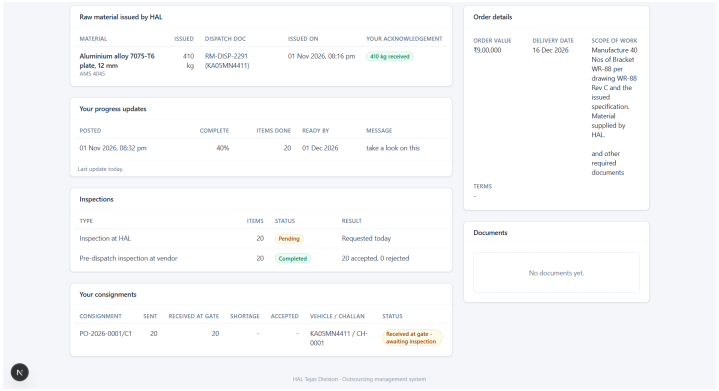

⇒ After clicking on the Record receipt they tell what they received (they can also add photo)

Add :- the information required here also

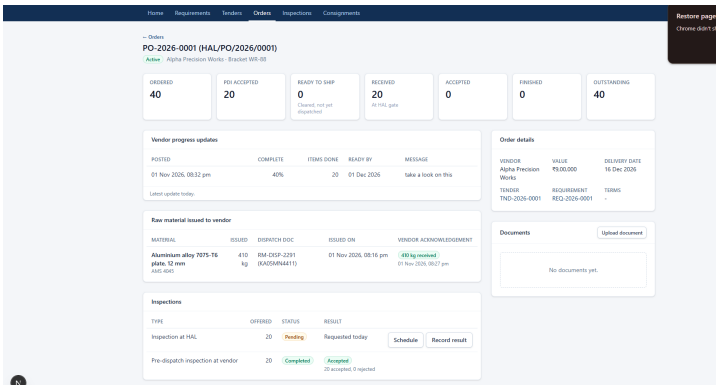

⇒ the order received by the gate.

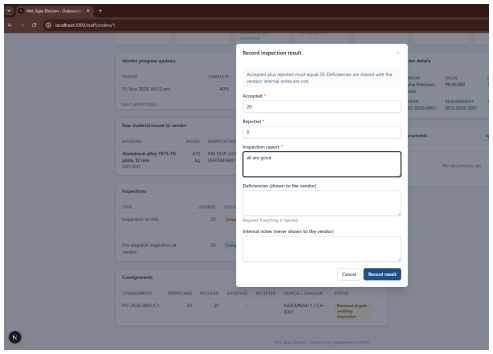

⇒ At Vendor side and also at the admin and other.

(2) Now Inspection at HAL (inspector_admin)

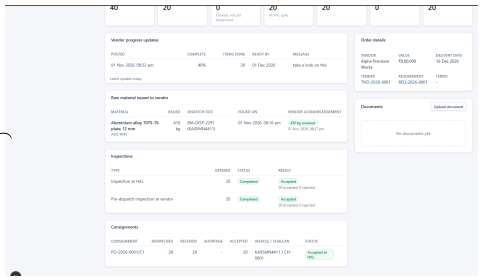

⇒ Now inspection of delivered product inside the hal.

1.

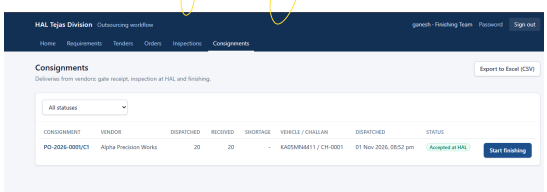

⇒ the check

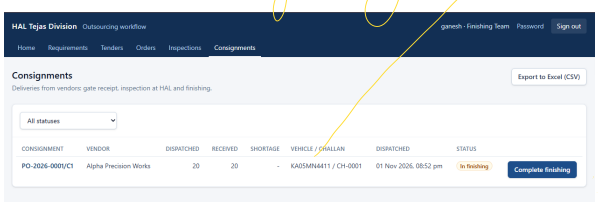

Status after update.

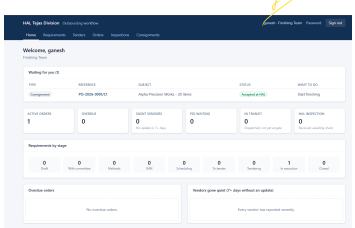

(3) Finishing Team :-

(Now finishing team will do all the finishing work)

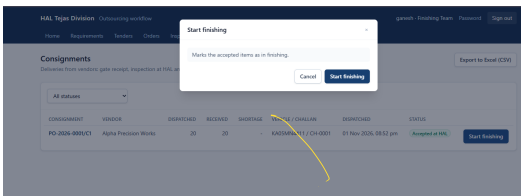

1.

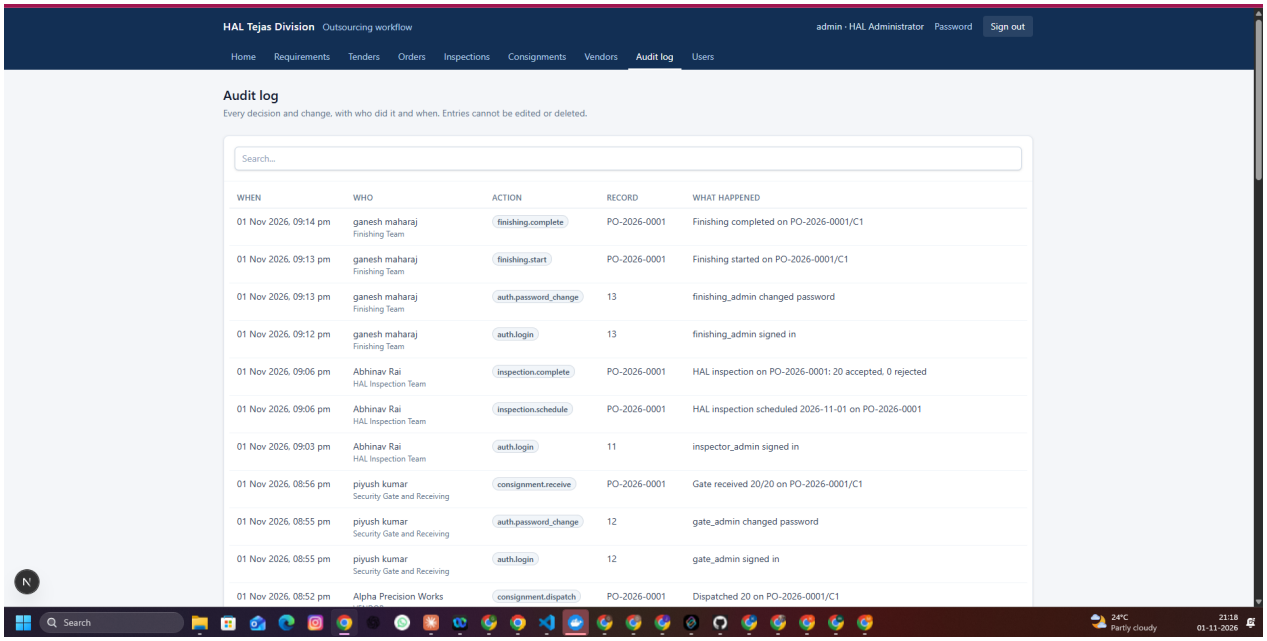

2.

3.

4.

Now the order finished from end to end

↳ In audit admin can see each and every movement at each stage when is what
